Ray,

Tetracorder is still running. When complete, one ftp session at a time.
There were 26 ftp processes running.

But the priority of the group should be to get the quant paper out.
We shouldn't be processing other data. All focus should be on
products for the paper and getting it into review.

Earlier, we had ~26 ftp processes dragging the system down with a load
factor of 4.2. Text editing was slow.

We need sample images of oil along side tetracorder rproducts.
We need text editing,
We need verification that tetracorder is doing the right thing
and not mesing up on some line.
We need the volume estimates examined, including the thickness maps,
areal fraction maps, volume maps examined.

run 11 is complete through volumes

/cc/oil2010/mapping/05.17/tetr11

Roger
