Marcia,

My understanding was that the WHOI proposal has gone already to the NIC for consideration. I offered up Kurt Hansen of USCG R&D who has tested the equipment at the MMS OHMSETT facilities, as a proposal reviewer.

David -

I am routing this to Bill Lehr of NOAA who is chairing the plume flow rate measurement team for consideration. This really would not be a USGS decision.

According to my Center Director in Woods Hole, Walt Barnhardt, Richard Camilli at the Woods Hole Oceanographic Institution is a world-class expert in marine flow-rate measurements. Richard employs an imaging multibeam sonar system and made a presentation to Congress about this technique on May 19th. Camilli's May 19th presentation to Congress is online at the website below. We recommend consideration be given to engaging Richard in our efforts to calculate flow-rate measurements in the Gulf. See slide #5 for good graphic of how to measure flow at end of pipe.
