Subject: Pooling Expert Assessments

Colleagues,

I attach a note that describes the results of pooling the assessments that six of the experts shared during the telecon yesterday: think of it as a consensus assessment (produced using a formal, established statistical method).

Director McNutt may like to use this as a support item in her conversations with Secretary Chu.

In the meantime I'll work on the issue that Frank raised - maximum versus expected volume - within the same general framework. I'm also ready to handle a similar collection of revised assessments that each of you may produce based on the new video.

Bill: please add Dr. Blaza Toman (Statistical Engineering Division, NIST) to the list of people in the acknowledgments section of the final report.

- Antonio
