Cc: Marcia K McNutt, Mark K Sogge

FRTG estimate of total oil released from the well as of June 10, 2010 = 984,000 BBLs

The FRTG continues work to refine estimates of the flow rate from the riser before the Top Hat device was installed. BP provided new video on June 8th that will be used by the Plume Analysis Team to estimate the flow rate after the riser was cut; results from the Plume Team and any revisions to the flow rate may be available by the end of this week
