Hi Alberto. The ROV seems to be drifting significantly during the periods 14:30:38 to 45 and 14:31:35 to 41. Did you do some image stabilization to account for the drift of the ROV? If you did, is there a piece of software you can refer me to for image stabilization?

Subject: Re: PHONE CHANGE AND AGENDA

Dear group,

following up with the discussion in today's call, I am forwarding a set of video sequences to analyze and compare.

The sequences are all from video TOPHAT_06-03-10_14-29-22:

- 14:30:33 to 35 (50 images)
- 14:30:35 to 37 (55 images)
- 14:30:38 to 45 (205 images)
- 14:30:47 to 49 (76 images)
- 14:31:35 to 41 (180 images)

Attached is the first image of each segment.

I think this is a good start. Please let me know if you have any difficulties with these images, or if you have any comments.

I will talk to you soon. Best,

Alberto
