I fixed some things that weren't quite accurate. The LMRP can't collect anything. It is only the Top Hat on the LMRP that collects the hydrocarbons. And the Q4000 isn't a containment system. It is a semi-sbumersible that actually flares the gas and oil after collecting through the choke line.

Sorry, Matt made a couple of additional edits. Please see attached clean version and we are good to go.

Thanks again Martha!

Martha,

These look good and draw from approved language which helps ☺.

Please see attached edits.

Thanks,

Julie

Julie, I suspect these are too long and look forward to any suggested changes.

Martha,

Just checking in to see if you were able to update the TPs on the new flow rate estimates? If so, can you please send?

Thanks,

Julie
