Mark -

There is going to be a meeting here early Monday morning led by Trevor Hill, along with flow and pressure analysts from the National Labs, to review information on what is known about hydrocarbon flow in the well. This seems to be the most important information that the USGS geologists will need to know for their work. Any chance we can get some or all of them here for that meeting?

Don - any chance you or someone from the FRTG's reservoir team could be here or participate via conference call?

Troy - can any of the MMS geologists be here?

Marcia

Marcia,

We can have Phil Nelson here. I will let him know right away.
